*Made of*  
**borosilicate**  
**glass**

Borosilicate glass is more resistant to impact and breakage than traditional glass and does not react with most chemicals, making it an ideal material for food storage containers. Borosilicate glass is also more transparent than traditional glass, which translates into better visibility of the container's contents. A key advantage is that borosilicate glass is more resistant to temperature changes than traditional glass, meaning that the containers will not crack when exposed to heat.

BAGS AND UMBRELLAS

# UMBRELLAS

Visibility of your logo in all weather conditions

## PRACTICAL PROTECTION FROM RAIN AND SUN!

Umbrellas are a reliable gadget for rain and sun, providing a large surface area for logo exposure. They differ in the number of panels – the more there are, the more elegant the shape of the canopy and the more space there is for branding. A wide range of sizes and folding mechanisms allows you to tailor the umbrella to different needs and occasions.

## WHAT IS AN UMBRELLA PANEL?

An umbrella panel is a single piece of fabric that forms the canopy. The number of panels affects both the appearance of the umbrella and the surface area available for placing a logo.

**OEKO-TEX Standard 100** is an international certification system for textile products that confirms that they have been tested for harmful substances and are safe for human health. Products bearing this certification must meet strict criteria regarding the content of chemicals such as pesticides, heavy metals, and formaldehyde, and can be used even by people with sensitive skin, including infants.

The **Global Recycled Standard (GRS)** is an international certification awarded to products containing recycled materials. It covers the entire production process, including the traceability of raw materials, the reduction of chemical use, and compliance with social and environmental requirements. The GRS certification confirms transparency and sustainable practices in the supply chain.
